

How to create Navigation bar using HTML and CSS...!

here's are some step using that you can easily create...!

step 1]. create Html file. In body portion

create div tag having name "container"

in side that create unordered-list like...

```
<div class="container">

<ul>
  <li><a href="#">Home</a></li>
  <li><a href="#">About</a></li>
  <li><a href="#">Help</a></li>
  <li><a href="#">Contact Us</a></li>
</ul>
```

step 2]. create css file with Extension .css and link with Html file

example:-

```
<link rel="stylesheet" href="navbar.css">
```

after creating css file Type

```
* {
padding: 0;
margin: 0;
}
```

The meaning of * in CSS is Universal Selector.

It will selects all elements and make margin padding 0.

Now we need to remove dots from link for that have to type..

```
ul {
  list-style: none;
```

```
}
```

- Now you can see dots is gone...!
- For remove underline from link and apply more css like color, font size and font-family(it use to give font style) you can see in following code..

```
ul li a {  
  text-decoration: none;  
  color: aliceblue;  
  font-family: Arial, Helvetica, sans-serif;  
  font-size: larger;  
}
```

Now we need to set all list in horizontal for that type

```
ul li {  
  float: left;  
  width: 100px;  
  line-height: 50px;("it is use to make text in center from top to bottom")  
  text-align: center;  
}
```

Step 3]. create bar suing following code.

```
.container {  
  height: 50px;  
  width: 1355px;  
  box-shadow: rgba(0, 0, 0, 1) 0 2px 2px 0;("use to give shadow to the bar")  
  background-color: black;  
  margin: 5px;  
}
```

Step 4]. Create mouse hover on link(change color when mouse cursor on link) for that

```
ul li a {  
  text-decoration: none;  
  display: block;  
  height: 50px;  
  color: aliceblue;  
  font-family: Arial, Helvetica, sans-serif;  
  font-size: larger;
```

```

}

ul li a:hover {
    background-color: aqua;
    transition: 0.6s;("make smooth transtion")
    color: black;
    border: 0.5 solid gray;
}

```

Steap 5]. Make sub menu of about list.

```

<li><a href="#">Home</a></li>
<li><a href="#">About &#8595</a>
    <ul>
        <li><a href="#">a</a></li>
        <li><a href="#">b</a></li>
        <li><a href="#">c</a></li>
        <li><a href="#">d</a> </li>
    </ul>
</li>
<li><a href="#">Help</a></li>
<li><a href="#">Contact Us</a></li>

```

sub menu
in About
list

And add css

```

ul li ul li {
    display: none;//will not display sub menu
    background-color: black;
    height: 50px;
    border: 0.5px solid gray;
}

```

Steap 5]. Make sub menu appear at hover at About list.

```

ul li:hover ul li {
    transition: 1s;
    display: block;//will appear sub menu on hover
}

```

Step 6]. Make sign up button and Login button under container div.

```
<button class="btn">Login</button>  
<button class="btn">Sign Up</button>
```

Step 7]. Apply css ob button.

```
button {  
  background-color: black;  
  color: white;  
  padding: 5px 40px;  
  margin: 10px 10px;  
  border: none;  
  cursor: pointer;// change mouse cursor on hover  
  float: right;  
  border-radius: 15px;// to give roundness border  
  font-size: larger;  
  font-family: Arial, Helvetica, sans-serif;  
}
```
